CAREER OBJECTIVE

B.E. Computer Science and Engineering graduate with hands-on experience in Python programming, relational database management using SQL, object-oriented design, data structures, and front-end web development using HTML and CSS. Proficient in writing optimized queries, implementing modular code architecture, and applying core software engineering principles to build scalable, maintainable applications. Seeking an opportunity to contribute technical skills in software development, database administration, or application development within a professional engineering environment.

TECHNICAL SKILLS

Programming Language: Python	Web Development: HTML, CSS
Database: SQL	Concepts: Data Structures, DBMS, OOPS
Other Skills: XPath, Regular Expressions (Regex)	Tools: Microsoft Excel

INTERNSHIP EXPERIENCE

Java Programming Intern — CodSoft	Jul 2024 – Aug 2024
- Engineered three Java-based console applications — Number Game, Student Grade Calculator, and ATM Interface Simulator — leveraging OOP paradigms: encapsulation, inheritance, polymorphism, and modular method structuring. - Implemented robust input validation routines, structured exception handling blocks, and multi-branch conditional logic to ensure fault-tolerant, production-quality application behaviour. - Applied Java control flow constructs, primitive and reference data types, and single-responsibility design to deliver clean, maintainable source code across all modules.	
Web Development Intern — Code Bind Technologies	Jun 2023 – Jul 2023
- Architected and developed a full-stack food delivery web application using HTML5 and CSS3, integrating structured semantic markup, grid-based layouts, and component-level styling for homepage, menu, item cards, and order form. - Implemented CSS media queries and fluid layout techniques to achieve fully responsive, cross-device rendering across desktop, tablet, and mobile viewports. - Executed systematic front-end debugging using browser developer tools and performed cross-browser compatibility testing to resolve rendering inconsistencies and optimize UI performance.	

ACADEMIC PROJECTS

Heart Disease Prediction using Machine Learning	Python ML Data Analysis
- Executed end-to-end data preprocessing pipeline — imputed missing values, applied feature engineering and selection techniques, and performed min-max normalization to prepare a structured medical dataset for model training. - Trained, validated, and benchmarked multiple supervised classification algorithms; performed comparative performance analysis using evaluation metrics to determine the optimal predictive model.	
Library Management System	SQL DBMS Database Design
Architected a fully normalized relational database schema (3NF) comprising Authors, Books, Members, and Borrow Records entities; implemented complex SQL operations including multi-table JOINS, correlated subqueries, and aggregate functions for comprehensive data retrieval.	

EDUCATION

Qualification	School / College	Year	Score
BE – Computer Science & Engineering	Annamalai University	2025	8.75 CGPA
HSC (Class XII)	Govt. Modern Girls Higher Secondary School	2021	89.5%
SSLC (Class X)	Government High School	2019	84.8%

CERTIFICATIONS

- Cloud Computing — SWAYAM NPTEL, IIT Kharagpur
- Social Networks — SWAYAM NPTEL, IIT Madras
- SQL — Udemy

ACHIEVEMENTS

- NCC B & C Certificate holder.
- Completed Typewriting in English (Senior & Junior Levels) and Tamil (Junior Level).

STRENGTHS & LANGUAGES

- Strengths:** Continuous Learner, Adaptability, Time Management, Team Collaboration
- Languages:** English and Tamil — Read, Write, Speak
